Digitalisation in Energy Sector: Trends and Challenges

Digitalisation aims to maximise opportunities and minimise risks arising from digitalisation and transformation. By using leading-edge technology in the domain, the aim of this topic is to develop solutions and strategies that can optimise the current system, provide a basis for innovation, and increase the sustainability of the energy system. The International Renewable Energy Agency (IRENA) has recently released an overview of the frameworks and best practices being applied worldwide. Several initiatives have been developed providing potential avenues and insights into how to ensure a digital transformation that can improve the energy system over enforcement and (ii) the electrification and decentralization of the energy system through digitalization.

SCCER-FURIES 2019

The 3rd Annual Conference of SCCER-FURIES will take place on January 23, 2019, in Zurich, Switzerland. The conference will provide a platform for researchers, practitioners, and policymakers to share their latest findings and experiences in the field. The conference will cover various topics including digitalisation, smart grids, and energy markets.

SCCER-FURIES is well positioned to utilize the opportunities and challenges arising from the digitalization of the power grid. From the microlevel of operation and flexibility to the macrolevel, SCCER-FURIES is well equipped to conduct research and provide solutions. The conference will provide a platform for researchers, practitioners, and policymakers to share their latest findings and experiences in the field.

In 2019, the SCCER-FURIES conference will take place on January 23. The conference will provide a platform for researchers, practitioners, and policymakers to share their latest findings and experiences in the field. The conference will cover various topics including digitalisation, smart grids, and energy markets.
